

Manhasset® Table-Lock

In addition to the two plastic Table-Lock pieces, this package contains two 1-1/4" machine screws and two nuts.

Installation Instructions:

Place the desk in a horizontal position. The two Table-Lock pieces fit on its underside of the desk against the sides of the neck mechanism with the concave surfaces aligning with the convex aluminum washers. The curves of the metal bracing pieces that support the neck and the

corresponding curves on the Table-Lock are not symmetrical, and the Table-Lock pieces will only fit correctly one way.

Looking from the ledge end of the desk, the piece with the hexagon nut receivers should be on your left. The two screws fit into the holes in the right-side piece. When tightening the screws, take care to ensure that the nuts are aligned and threading properly. Do not over-tighten, as damage to the Table-Lock may occur.
