# VOYAGER<sup>™</sup>

## Instructions For Assembly:

1. Make sure the Shaft is fully compressed; remove the bolt from the lower end of the Shaft (**See Diagram A**) and insert that end of the Shaft into the tripod Base. Then reinstall the bolt (through the bottom of the Base) and tighten. (**See Diagram B**) Then pull the legs of the tripod Base in an outward direction (extending the legs of the Base) to stabilize the Shaft. Moving the Tripodal Base upper slide downward may help in extending the Base legs. Place the Shaft and Base unit in the upright position. (**See Diagram C**)

**Note:** During transit/shipping it is possible for the tapered nut (located inside the shaft) to become unseated. If this occurs, it could allow the tapered nut to spin when trying to remove or re-insert the bolt. If this loose (spinning) tapered nut condition were encountered, it may be easily remedied by doing the following:

With the shaft completely compressed, briskly tap the chromed end of the shaft on a hard floor or a hard surface. You shouldn't have to use extreme force, but it won't hurt to firmly tap it a few times to reseat the internal tapered nut. With the tapered nut resealed, you should be able to remove, reinstall and properly tighten the bolt.

If this solution does not work, please feel free to contact Manhasset at (800) 795-0965 or at [info@manhasset-specialty.com](mailto:info@manhasset-specialty.com), and we will send a replacement shaft right away.

2. Loosen the Twist Lock Cylinder on the Neck (connecting device) (back side of the Desk). This is done by turning Twist Lock Cylinder (clockwise as viewing the Neck from the Shaft-connecting end) until it comes to a 'stop' and is a comparatively loose position. Place the Desk on top of the Shaft and insert the chromed end of the Shaft into the cylindrical cavity of the plastic Neck. After the end of the Shaft is inserted, turn the Twist Lock Cylinder counter-clockwise to secure the shaft to the Neck. (**See Diagram D**)

3. Your Voyager<sup>™</sup> stand is now fully assembled. To disassemble for travel just reverse direction 2.

4. Voyager<sup>™</sup> Tote Bags (sold separately) For ease of transport place the Voyager<sup>™</sup> desk and the retracted Base/Shaft in this convenient nylon tote bag, which features an adjustable shoulder strap. (**See Diagram E**)
